Exp no:3 Survey Report on Emerging Trends in low-code Application Development

Aim:

To study the emerging trends in low-code application development and understand how low code platforms and changing the software development Process

Introduction:

Low code application development allow users to create application using visual interface, drag and drop components, and minimal hand-written code. It helps organization develop application faster and makes application development accesible to user with limited Programming experience.

Emerging Tool:

1. AI - Assistant Development:

AI is increasingly used to Generate code, workflow and application mobile.

2. Mobile Application Development:

low-code platforms Provide tools for quickly creating responsible Mobile Application.

3) Cloud-Based Development:

Cloud platforms enable applications to be developed, deployed and managed online

4) Workflow Automation:

Business use low-code tool to automate repititive tasks and business Process

5) Integration with API:

Modern platform Provide easy integration with database, API and third Party Services

6) Citizen Development:

Non-Programming can build Simple business application with minimal coding Knowledge

Advantages:

Fast development reduces development effort, easier maintainance rapid Prototyping and improving collabration between technical and non-technical users

Conclusion:

Low code application development is becoming an important approach for building application quickly and efficiently.

Result:

The emerging tool in low-code app development user and their role is simplifying and accelerating application development was understood.
